EDUCATION

University of Pennsylvania

Master of Applied Economics and Data Science
(Expected)

Relevant courses: Microeconomics & Macroeconomics, Econometrics, Prediction Modeling, Casual Inference, Computational Methods for Economists (R, Python, SQL, Git), Machine Learning for Economists

Shanghai University of Finance and Economics

Bachelor of Economics

GPA: 3.67/4.0 (Top 10%)

Relevant courses: Microeconomics, Macroeconomics, Financial Accounting, Managerial Accounting, Investment Theory and Practice, Financial Markets and Risk Management, Data Mining and Business Analysis (Python)

Honor: Shanghai Outstanding Graduate (2026), Second-Class Scholarship, Meritorious Winner in 2025 MCM

Philadelphia, PA

Aug. 2026 – Dec. 2027

Shanghai, China

Sep. 2022 – Jun. 2026

PROFESSIONAL EXPERIENCE

Founder Securities

Strategy Intern, Research Department

Shanghai, China

Apr. 2026 – Jun. 2026

- **Authored daily strategy recaps for STAR 50 and ChiNext 50 benchmark:** Evaluated ETF fund flows, sector performance, and policy/industry news to identify market drivers and deliver actionable insights
- **Researched crowded trade in China's equity market:** Analyzed major crowded trade episodes from 2013 to 2025 in China, validating the 20-day price-volume correlation metric and applying it to the 2026 optical communication rally to quantify trade concentration and map post-unwind rotation patterns
- **Conducted thematic research on China's household consumption:** Used macroeconomic data to decompose the household consumption rate into disposable-income share and consumption propensity, identified low consumption propensity as the key constraint; benchmarked US/Japan economic transitions to formulate policy recommendations

ZhongAn Online P & C Insurance Corporation Limited

Risk Data Analytics Intern, Data Science and Application Center

Shanghai, China

Aug. 2025 – Feb. 2026

- **Conducted anomaly analysis for shipping insurance:** Used SQL window functions to identify the top 10 regions by monthly claim ratios; flagged buyers with return rates over 60% in these areas and applied Python-based network analysis to uncover 7 high-risk clusters
- **Built LLM-powered multi-agent systems:** designed and refined AI agent systems to identify suspicious intermediaries; flagging 120 cases; 80% confirmed as high-risk through claim audits, mitigating RMB 200K in potential claim losses
- **Detected suspicious fraud groups in health insurance:** Analyzed prescription images to identify suspicious patterns among users with matching medical information and highly similar image backgrounds; flagged 600 cases, 65% confirmed as fraudulent through claims audits, preventing RMB 600K in potential claim losses
- **Developed a real-time fraud detection dashboard:** Monitored key risk metrics including claim ratio, surrender rate, and exposure; built interactive Power BI dashboards that improved fraud alert timeliness by 40%

The Hongkong and Shanghai Banking Corporation Limited

Operational Risk Management Intern, Digital Business Services

Shanghai, China

Oct. 2024 – Jul. 2025

- **Automated data validation and rule checking:** Built Python scripts to detect data-quality issues, dual-role conflicts, and compliance exceptions, reducing recurring system errors by 20% and manual processing time by 80%
- **Performed system discrepancy analysis:** Developed a Python tool using OpenPyXL to compare datasets between the legacy Regulatory Reporting Information System (RRIS) and the new Regulatory Reporting Management System (RRMS), improving data alignment efficiency by 50%
- **Facilitated Cross-Department Coordination:** Partnered with branch and department representatives to resolve identified issues, coordinated remediation actions and monitored progress

China Foreign Exchange Trade Systems

Market Analyst Intern, RMB Market Department

Shanghai, China

Jul. 2024 – Sep. 2024

- **Conducted bond market research:** Analyzed issuance trends of urban investment and industrial bonds using primary and secondary market data; evaluated coupon rates, credit spreads, and institutional turnover to assess interest rate preferences, credit quality, and market risk appetite
- **Automated daily bond market reporting:** Developed Python scripts to monitor bond market indicators via Wind and iFinD APIs; calculated key metrics such as coupon rates and bid-to-cover ratios, and automatically generated yield curve visualizations, enhancing reporting efficiency and cutting manual preparation time by 80%

RESEARCH EXPERIENCE

A Machine Learning-Based Business Recommendation System Using Yelp Data

Team Leader, Group Project in Data Mining and Business Analysis Course

Shanghai, China

May. 2025 - Jul. 2025

- **Predicted restaurant star ratings:** Developed an XGBoost regression model integrating structured business, spatial, and semantic features to predict restaurant ratings and address the cold start problem for new merchants, reducing Mean Absolute Error (MAE) from 0.72 to 0.58 compared to the baseline
- **Constructed user satisfaction index:** Applied TextBlob-based sentiment analysis to extract polarity and subjectivity from reviews; integrated them into a user satisfaction index that identified high-quality merchants with 85% accuracy
- **Conducted social network analysis for recommendations:** Identified core subgraphs through snowball sampling and detected influential seed users via centrality metrics; applied the Louvain algorithm for community detection and designed community-specific recommendation strategies to enhance the propagation of high-quality merchants

Olympic Medal Prediction and Influencing Factors Analysis

Shanghai, China

Team Leader, 2025 Mathematical Contest in Modeling (MCM) - Meritorious Winner

Jan. 2025

- **Developed medal prediction model:** Built a LightGBM regression model integrating historical performance metrics, home advantage, and athlete counts to predict Olympic medal counts; applied cross-validation and feature importance analysis to optimize model performance, reducing RMSE from 7.93 to 6.21 compared to the baseline
- **Forecasted emerging countries' first medal:** Implemented a Logistic Regression model to identify which emerging countries (e.g., Angola, Morocco) were likely to win their first medals, achieving an AUC of 0.816
- **Evaluated the "Great Coach" effect:** Built a network model linking coach transfers to country-level medal performance; visualized the positive impact of elite coach mobility using Lang Ping's China–U.S. case

SKILLS

Programming Languages/Tools: Python (NumPy, pandas, scikit-learn, Pytorch), SQL, C++, R, Power BI

Language: Chinese (native), English (fluent; TOEFL 107)

Interests: Musical Theatre, Swimming
